LAT-Release™

AUTOMATE SELF-CHECK PROCESS WITH SECURE LOCK CASES.

Don't Limit Your Self-Check Statistics Because of Lock Boxes

- Simple, and easy to use.

- Multiple Modes of operation

  - Fully controlled by the host FlashScan™, allCIRC™ or any other automation equipment via the LAT-Release™ API Set.

  - Stand-alone operation relieves circulation desk load of opening cases.

- Patrons <u>cannot</u> unlock the case unless the host system validates your rules and policies and then allows the case-opener to work.

- Works with many popular lock-case manufacturers.

- "<u>Desensitize while you Open</u>" option available to desensitize the materials inside the case during the opening process.

- "<u>RFID while you Open</u>" option available to reset RFID tags in the materials during the opening process.

- Portable - move where needed.
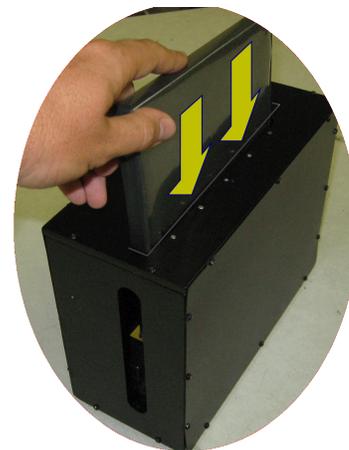

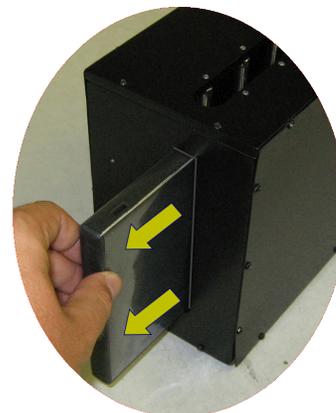

API Control

LAT's genuine commitment to libraries and use of technology to better library operations extends beyond the naïve notion of "buy only my products".

To that extent, we have extended the use of LAT-Release™ technology to allow other vendors to integrate LAT-Release™ into their systems.
