- Includes Enterprise Management Software
- Includes Meganite® Top
- One Year Warranty

Thou shall not steal the DVDs because they are stored inside allCIRC™. Patrons select from empty cases to retrieve and check out items.

allCIRC™

An **all-in-one** system designed to secure and circulate disk media and provide patron self checkout for **ALL** items in your library.

One of the key universal “problems” that faces libraries of today is the need to somehow secure their media collections (CD/DVD/BluRay/HD/Games), which is by far the fastest growing circulation segment of virtually every library. In addition, the need to provide self-service options to patrons is paramount to any library that wants to continue to attract patrons, while controlling costs. Needless to say, library budgets are rapidly shrinking, it’s now “do more with less” every year.

allCIRC™ is a system designed for libraries to solve these problems.

Media Protection

allCIRC™ provides complete (100%) protection for your CDs and DVDs by dispensing the items only to validated patrons, which have passed all the circulation rules of the library. Patrons can’t access the media unless **allCIRC™** allows this access to occur. Once proper authentication and validation has occurred, **allCIRC™** then checks-out the item to the patron in a transaction similar to your circulation desk.

Built-In Patron Self Checkout System

allCIRC™ not only provides you total protection for your media items, but it also houses a complete self-check-out / check-in station for all other materials in your library, such as books, magazines, VHS tapes... etc. **allCIRC™** is truly a one-stop-station for all patron needs.

Affordable

Designed for libraries with heavy librarian input, **allCIRC™** is a 3rd generation product. Not only will you save by not purchasing security products (Lock-Cases, EM Strips, RFID tags...etc.), you will also extend your budget because **allCIRC™** costs less than a standard self-check—now that’s value!
